

The British Institute of Musculoskeletal Medicine

LUMBAR SPINE SHORT COURSE

Course Leader:

**Dr. Simon Harley MRCGP DGM DM-SMed
Specialist in Musculoskeletal Medicine**

GPs and other interested Doctors are invited to attend the new "Back in a Day". This course is especially suitable for GPs interested in learning more about the spine, covering the areas of anatomy, examination, red and yellow flags, clinical patterns, demonstrations of manipulation, pain management and injections. The course can also serve as an introduction to the comprehensive modular course run by The British Institute of Musculoskeletal Medicine (BIMM).

Participants will be sent a learning log, and a CD with additional learning resources prior to the course (Microsoft Office for windows or Mac essential to view this material). For the purposes of a personal learning plan this will provide 2-3 days of distance learning material. To benefit from the course learners will need to spend time looking through the material beforehand and prepare one or two case studies for the workshop.

The course culminates in an intense 1-day workshop with teaching by experienced BIMM tutors in a ratio of at least 1 tutor to every 5 learners.

This course is complementary to the very successful Peripheral Injection courses. Book early to avoid disappointment!
